Services we offer

Today, companies in virtually every industry are using sophisticated business web platform to fuel their growth but many are still struggling to keep up with their growth and manage costs effectively because of hodge podge of disconnected functional systems causing process bottlenecks and employee productivity issues. Integrated business web platform are transforming how companies run and enabling them to transcend growing pains that previously were holding them back from taking their business to next level of profit growth. We have dedicated different verticals to process with your ideas, lets discuss our services.

Web Design & Development

Enterprises and the organisations from practically every industry are getting to use the world wide web platform for channeling their services and making themselves be seen and experienced from anywhere around the Earth. This meant to happen a convenient platform to making your presence felt and indeed a face of your firm. Progressive web development are what we work to deliver you in the immediate real time deployment, with all kinds of innovative Concepts, interactive elements and interesting designs that put the picture in frame.

Web Application Development

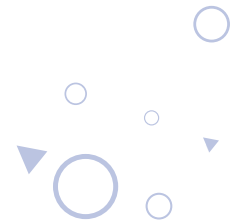

An individual or a group of persons who undertaken in any activity to run a business only with an interaction to make profits and to grow the services more reachable. At Aytis, We are here to deliver you a web based application by which you can remotely manage your working database or business process information among with analysing the actual needs, industry and product requirements. We promise to avail you a scalable & robust automated solution for your domain of business.

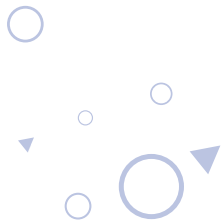

Internet Security Planning

We equipped to maintain & enhance technical efficiency, reduce system downtime and ensure quality performance. Our main aim is to save valuable time of our clients by minimising their efforts to counter any software related problems, monitor, identify and repair bugs. In addition to bug fixing, we help you through implementation of new soft-wares, system upgrades, content updates, real time repair & monitoring and everything that you may need to support productivity of your IT resources and organisation.

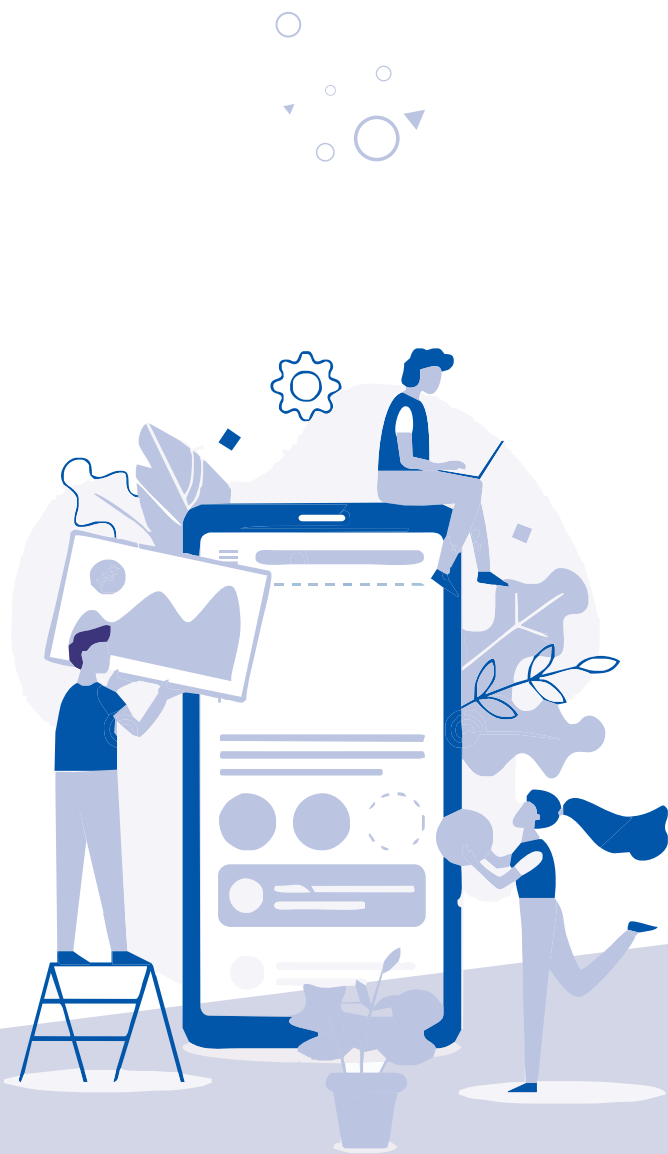

Digital Media Marketing

A business on the Internet can give value in the form of time, attention and advocacy from the customers. At the other side for the users, value can be added in the form of entertainment, enlightenment and utility. It creates a new paradigm for the way in which consumers connect with brands & with each other. In other words it can be explained as, The exchange between producers and consumers is a two- way street that provides benefit to both parties simultaneously.

Mobile Application Development

IPHONE /IPAD IOS

PLATFORM COMPATIBILITY

RESPONSIVE DESIGN

ANDROID

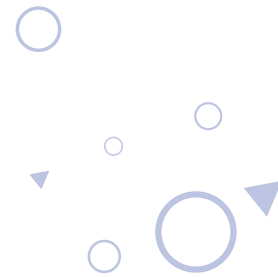

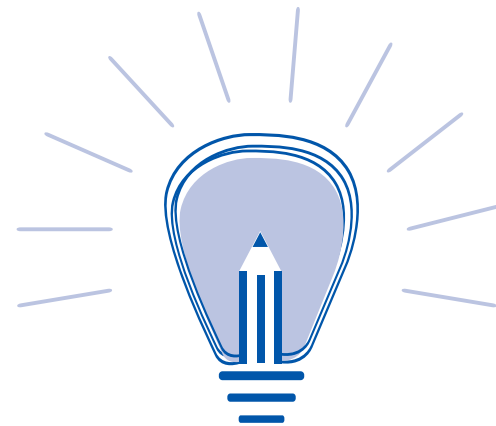

PLATFORM COMPATIBILITY

CUSTOM FUNCTIONALITY

Smart phones are in the pocket of every consumer today. We can help you capitalise on that market with strategic development of customised mobile phone applications. We can provide mobile applications with

Graphic Design

Graphic design is the process of visual communication, and problem-solving through the use of type, space, image and color. Our graphic design services include identity (logos and branding), publications (magazines, newspapers and books), print advertisements, print materials (business cards, brochures, flyers, letterhead, stationary, posters), website / video graphics & elements, signs and social media marketing.

Consulting Services

Whether you are a small business or a large corporate entity, we know that every business has unique needs. Aytis keep track on record managing IT systems and expeditiously troubleshooting problems in real-time. Aytis has a BOT team to manage websites and internal applications. We can host and manage your entire IT infrastructure, including desktops, servers, networks and more – and provide you with a responsive relationship that feels almost like we're in-house.

IP/CCTV ONLINE SURVEILLANCE SYSTEM

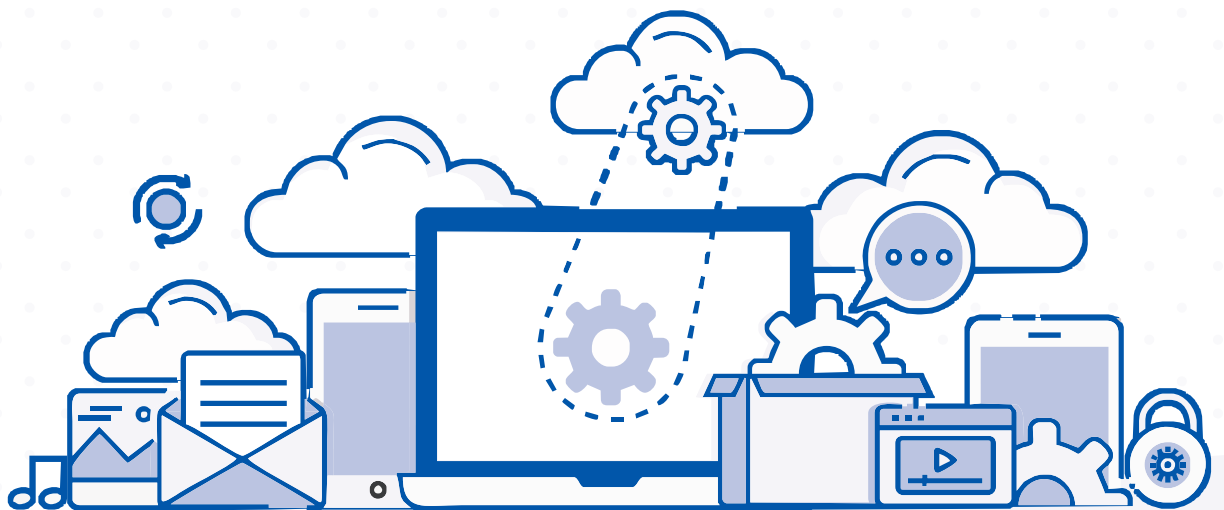

CCTV (Closed Circuit Television) subsystem consists of cameras and other digital recording equipment and devices that are used to monitor people, places, processes and the properties. It is a form of visual security which can be recorded by transferring the data to other devices like computers, mobile phones etc using IP i.e. Internet Protocol solutions. With our surveillance application you can connect the CCTV surveillance system to your mobile phone and without any computer or laptop you can easily access the live streaming of the recordings.

Cloud Model Integration

Cloud computing services provide the opportunity for companies to adopt the best suited service delivery models in combination to address business needs with efficiency and speed. The benefits offered by the cloud in general are:

collaboration, data availability, flexibility, greater business agility and cost savings. Cloud computing services are providing the headlights on how companies can invest and use technology. Cloud models create what is known as 'shadow IT', where the need for IT personnel is reduced and employees are able to use enterprise applications efficiently.

Bulk-message API Integration

SMS is lightning fast, literally putting your message into your subscribers' pockets or purses seconds after you send. The average time for all mobile carriers and SMS services is less than 7 seconds from send to received. For small to medium sized businesses the cost of outdoor advertising like Newspaper ads, commercials etc is excessive. On the other hand, Bulk SMS services have low set up and running costs. Campaigns can be launched and implemented for a tiny fraction of cost, yet you can contact 1000 customers in a matter of seconds.

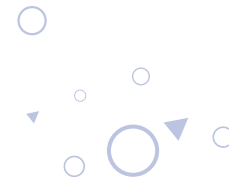

Payment Gateway Integration

A payment gateway authorises payments for retailers in all business categorisations. They ensure that sensitive information, such as credit card numbers, entered into a virtual terminal or on an E-commerce website, are passed securely from the customer to the merchant and from the merchant to the payment processor through the use of encryption. Benefits of a Payment Gateway are Secure transactions, Expanded customer base, Bundled with shopping cart, Faster transaction processing, Ease of convenience.

Trusted Partners

Our Logo Definition

Three intersecting rings forming the "Tripod of Life"

Rings or circles are a symbol of wholeness and unity. They have no beginning and no end. They represent the infinite possibilities of creation the are contained in the void.

Three intersecting circles form the basic trefoil unit generally known as the "Tripod of Life" and have been held sacred by many cultures. They are said to represent the energy/form of the Second Day of Creation and are often used to symbolize the Trinity. They are a very powerful representation of the creative force of the Universe, and inscribe three intersecting vessica piscis. At their center is formed a triangle with curved sides. Straight-sided triangles are shapes that represent balance, stability, and equilibrium and their three internal angles add up to no more than 360 degrees of rotation. Curved sided triangles, whether in a flat plane or in spherical geometry (like our Hemisphere) contain more than 360 degrees. This "pregnant" triangle is a lens for powerful energies from Higher Realms. Throughout history, this symbol of three intersecting circles or rings has been used to represent everything from the Holy Trinity to beer companies.
